concern about the reduced availability and the increased cost of petroleum fuels prompted great efforts in recent years to reduce the fuel consumption of auto mobiles the ongoing efforts to reduce fuel consumption have addressed many relevant factors including increased engine performance reduced friction use of lightweight materials and reduced aerodynamic drag the results of the investigations assessing the various factors affecting fuel economy have been published in journals conference proceedings and in company and government reports this proliferation of technical information makes it difficult for workers to keep abreast of au developments the material presented in this book brings together in a single volume much of the relevant materials summarizes many of the state of the art theories and data and provides extensive lists of references thus it is hoped that this book will be a useful reference for specialists and practicing engineers interested in the fuel economy of automobiles j c hilliard o s springer vii contents 1 automotive fuel economy david cole i introduction and background 1 n fuel economy factors 9 a engine 11 b drive train 20 c vehicle factors 22 d operating factors 28 e test cycles 32 references 33 2 fuel economy and emissions j t kummer i introduction 35 n emission regulations

medium and heavy duty trucks motor coaches and transit buses collectively medium

and heavy duty vehicles or mhdvs are used in every sector of the economy the fuel consumption and greenhouse gas emissions of mhdvs have become a focus of legislative and regulatory action in the past few years this study is a follow on to the national research council s 2010 report technologies and approaches to reducing the fuel consumption of medium and heavy duty vehicles that report provided a series of findings and recommendations on the development of regulations for reducing fuel consumption of mhdvs on september 15 2011 nhtsa and epa finalized joint phase i rules to establish a comprehensive heavy duty national program to reduce greenhouse gas emissions and fuel consumption for on road medium and heavy duty vehicles as nhtsa and epa began working on a second round of standards the national academies issued another report reducing the fuel consumption and greenhouse gas emissions of medium and heavy duty vehicles phase two first report providing recommendations for the phase ii standards this third and final report focuses on a possible third phase of regulations to be promulgated by these agencies in the next decade

technologies and approaches to reducing the fuel consumption of medium and heavy duty vehicles evaluates various technologies and methods that could improve the fuel economy of medium and heavy duty vehicles such as tractor trailers transit buses and work trucks the book also recommends approaches that federal agencies could use to regulate these vehicles fuel consumption currently there are no fuel consumption standards for such vehicles which account for about 26 percent of the transportation fuel used in the u s the miles per gallon measure used to regulate the fuel economy of passenger cars is not appropriate for medium and heavy duty vehicles which are designed above all to carry loads efficiently instead any regulation of medium and heavy duty vehicles should use a metric that reflects the efficiency with which a vehicle moves goods or passengers such as gallons per ton mile a unit that reflects the amount of fuel a vehicle would use to carry a ton of goods one mile this is called load specific fuel consumption lsfc the book estimates the improvements that various technologies could achieve over the next decade in seven vehicle types for example using advanced diesel engines in tractor trailers could lower their fuel consumption by up to 20 percent by 2020 and improved aerodynamics could yield an 11 percent reduction hybrid powertrains could lower the fuel consumption of vehicles that stop frequently such as garbage trucks and transit buses by as much 35 percent in the same time frame
